JOB DESCRIPTIONS

APPLICATION ANALYST - INFOSYS

2015-2016

Started my carrier with Infosys as application analyst in 2015 and worked for 10 months. In just work span of 10 months I was recognised as rising star in team.

ASSOCIATE BTA – DELOITTE CONSULTING

2016- 2019

Joined Deloitte as ABTA and got opportunity to explore multiple technologies and help teams by automating their work. From last 2.5 year learning and working on data science POCs, took part in data science competitions, completed one data science certification and also working on solving real time bussiness challenges with help of data science.

COLLEGE PROJECT.

TITLE: SANDESH

DESCRIPTION: Android chat application, which was built on top of GCM technology. Users can add their friends and start chatting with them. The application was built to work on push notification.

WORK ON DATA SCIENCE.

1. **Automatic ticket triaging for my project:** To solve the problem of manual triaging and avoid manual mistakes, I built a model and integrated my code with ticketing tool. It can get details of newly created ticket and classify it at 2 levels and then assign it to a team member who can work on it.
2. **Zomato user rating prediction:** Studied the provided variables and applied statistics to build a model for user rating prediction of any given restaurant.
3. **Airbnb price prediction:** studied the variables, analyzed the room pictures and built a model to predict the room price of a room for Airbnb.

EDUCATION HIST.

2012 - 2015 B.SC.I.T. 66.76 %
Shankar Narayan college, Mumbai University.

2011 - 2012 HSC 62.82%
J.H. Poddar Jr College, Maharashtra board.

2001 - 2010 SSC 75.45%
J.H. Poddar Jr College, Maharashtra board.

TECHNICAL SKILLS

CURRENT PROFILE

ASSOCIATE BUSSINESS TECHNOLOGY ANALYST

2016-2019

Working on a health care project as analyst. I create python scripts to collect data from ticketing tool apply statistics/ data mining and NLP to find the reason and probability of the same issue. I have even implemented Automatic ticket triaging model which processes ticket data with help of NLP and try to put it in required bucket for resolution. I am working on training a model which can even suggest the suitable solution approaches for the newly created issues.
